

One chain from intent to operating software.

The solution

AthenaRun is not a coding tool. It is the delivery chain around the code: AI agents run every stage, a person signs every gate.

WHAT IT IS

An engineering platform

Six stages from business intent to software in operation. Every stage is run by an agent and documented as it runs.

WHAT IT REPLACES

The hidden half

Requirements, compliance, integration, QA, release, operations. The work nobody scopes and everybody pays for.

WHAT YOU GET

A signed application

Integrated, tested, audit-proof, documented. Running software with a signed audit trail, not a prototype.

Coding agents produce code. **We produce an application someone can sign.**

How we earn. Two lines, one delivery chain.

Business model

Customers buy a delivered application today, and license the platform once their own team can run the chain.

SERVICE · BUILD & RELEASE

[Fixpreis]

Fixed price per application, scoped from the signed concept. Gates 1–5. No open-ended time and materials.

SERVICE · OPERATE

[pro Monat]

Monthly retainer. Gate 6: monitoring, evolution, support. The audit trail stays live as long as the software runs.

PLATFORM · LICENSE

[pro Jahr]

Annual subscription for teams that run the chain themselves. Same gates, same audit trail, their engineers.

WHY BOTH LINES

Delivery proves the chain and funds the company. The license is what scales it past our own delivery capacity.

Delivery cost falls with every build. **The engineering library is the margin, and the license is the leverage.**

The ask. €500k to make the engine repeatable.

The ask

Pre-seed round, [Instrument]. [Monate] months of runway to [Meilenstein].

USE OF FUNDS

ENGINEERING

40%

€200k

Platform hardening, the engineering library, the autonomous build pipeline.

DELIVERY

25%

€125k

Solution engineers to take the first customers through all six gates.

GO-TO-MARKET

25%

€125k

Convert the seven LOIs, activate the channel partner, run outbound on Baru.

COMPLIANCE & INFRA

10%

€50k

EU hosting, audit tooling, ISO 27001 and EU AI Act readiness.

MILESTONES BEFORE THE NEXT ROUND

[Anzahl] paying customers · [ARR] recurring revenue · [Zertifizierung] certified · by [Quartal]

The engine is built and proven on three systems. **This capital buys distribution, not discovery.**

AI writes code. It doesn't finish applications.

Enterprise-grade means integrated, tested, audit-proof and signed off by a person.

We deliver the finished application.
